Executive Summary

Waggle is a noncustodial marketplace protocol - We are strong believers in the multichain future. The Waggle platform facilitates the trustless exchange of locked tokens from the reserves of project teams through a community raise.

Waggle curates a public-facing market interface and generates protocol revenue on locked tokens trading activities. We are implementing our multi chain protocol on BSC, ERC20 and Solana before our IDO.

Introduction

Waggle believes in providing opportunity for all investors to have an exposure to primary investments to generate supernormal returns for their portfolio. Most of the significant gains (in terms of multiples) in each cryptocurrency market cycle are made in early funding rounds and presales. Increasingly, these offerings are being enjoyed by more and more classes of investors, but retail investors often do not have access to these opportunities.

Also, we work with project teams directly with strong marketing efforts - generating report on use of funds as well as due diligence. We provide monthly project specific reports. We want to empower both project and the community with a community raise using the treasury tokens from projects.

At Waggle, we have put together a marketplace protocol to bridge the inefficiency in the market for the trading of locked tokens which allows buyers and sellers to go through a multi-chain & truthlessly DCX transactions.

Party	Stake holders	Value	
Seller	VC/Advisors/Project Team	Empower their community with primary investments with a community raise as well as providing liquidity for projects for future developments	
Buyer	Retail Investors	Buy locked allocations for long-term positions at discounted rates, a strong alternative to staking with a lock-up period.	

Waggle Utility Overview

Token Staking

While staking entitles users to the tiered participations, we will also further incentivise the users with yield. Holders will get airdrop in terms of the fees received from Waggle.

Tiered Participation

Our token HOLDERS are able to stake \$WAG and receive a portion of the platform fees on top of the community pool. Users can choose between stake amount or lock-up duration to increase their yield.

The stakes also put them in tiers of participation in Waggle's token sales which determine their allocation and fee brackets

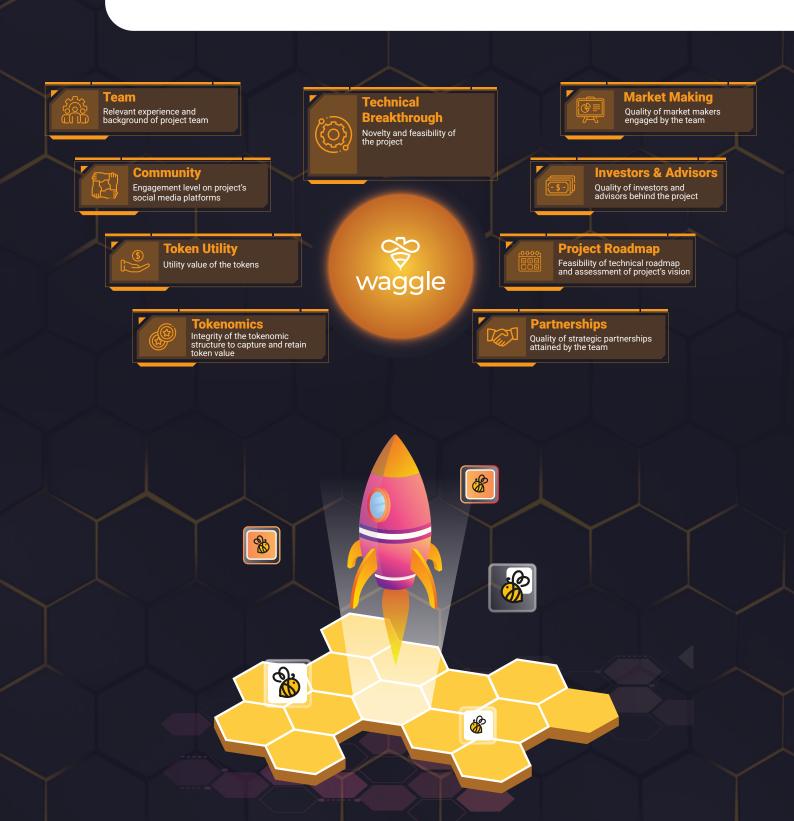

Governance (Coming soon)

Waggle takes huge pride in our due diligence process and for our community. We want them to be the last one to decide which project should be selected and launched on our platform. In our governance system, we'll allow the community to vote for the projects they want to be launched on our platform with a set of due diligence processes transparent to them.

What criteria are we looking for?

For project teams to sell their locked tokens and raise funds on Waggle, they will undergo a strict due diligence and KYC process to ensure their trustworthiness and credibility. Waggle will then list their project on Waggle Market where you can purchase their tokens on a first-come-first-serve basis. Below are 9 important factors that are required for a project.

Tokenomics

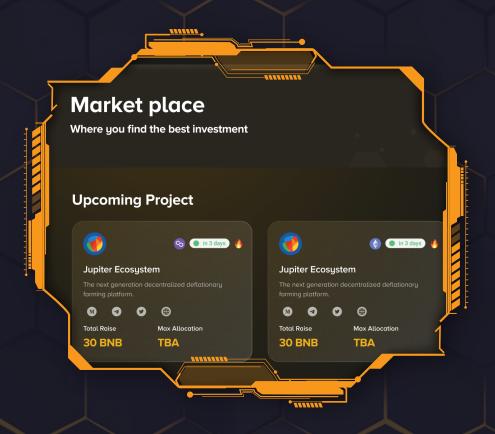

In Conclusion

Waggle is coming to the market since we want to solve the most current problems between buyers and sellers in the primary market, of allowing retails to access to large VC-backed projects, and of solving iliquidate vesting projects in the early stage.

As more interesting projects are being built on different chains, Waggle will be bringing these opportunities to our community to participate in top projects in the space. Our Waggle community will be able to participate in exclusive deals to purchase tokens which are subjected to vesting schedules at a discount to their existing market price.
